

New York State Department of Transportation

New York Statewide Services ITS Architecture Review Workshop

December 15, 2008

Consensus Systems Technologies
Shenorock, NY

Robert S. Jaffe, Ph.D.
(914) 248-8466; rsj@consystec.com

Patrick Chan, P.E.
(718) 767-5120; patrick.chan@consystec.com

Agenda and Workshop Schedule

Item	Description
1	Review Agenda and Introductions
2	Review purpose for update of the <i>New York Statewide Services ITS Architecture</i> and Project Schedule.
3	ITS Architecture Briefing - What is an ITS Architecture - Where ITS Architecture “products” show up - Using the ITS Architecture as a tool for systems engineering
4	Review and resolve areas of ambiguity and inconsistency: - <i>NYSDOT IEN</i>
5	Web site demonstration and procedure for stakeholder review of the New York Statewide Services ITS Architecture
6	Review of Draft ITS Architecture Maintenance Plan
7	Wrap-up and Questions

- Introductions

Item 2: Review Purpose of Update of the Statewide Services ITS Architecture and Schedule

Purpose of ITS Architecture Update

- 12 Main Office Priority Projects Updates/Included

1. 511NY.ORG Traveler Information System
2. Information Exchange Network (IEN)
3. Video Exchange Network (VEN)
4. Regional Streetwise Servers
5. Transit Service Information Portal (TSIP)
6. Regional Bus Rapid Transit (BRT)
7. Commercial Vehicle Operations / WIM / Real-time information for Inspectors
8. Integrated Incident Management System (IIMS)
9. Maintenance Asset Management Information System (MAMIS)
10. Asset Management System
11. Maintenance Decision Support System (MDSS) and Road Weather Information System (RWIS)
12. STICC - Statewide Transportation Information Coordination Center (STICC)

Purpose of ITS Architecture Update

- Other Projects

13. NYSTA E-ZPass
14. MPO Transportation Database and Archived Data Management
15. Regional Traffic Operations Center (RTOC) "Template"

NYSDOT Statewide Services ITS Architecture Update Schedule

Item	Dates	Description
1	10/24/2008	Kick-off Meeting
2	10/24 – 12/12/2008	Meetings with Main Office priority projects representatives to review preliminary market packages.
3	12/15/2008	Draft Statewide Services ITS Architecture Review Workshop and Draft Web Site: www.consystemec.com/newyork/web
4	12/20/2008	Cut-off date for stakeholder feedback on the web based draft architecture. Feedback should be submitted via: <ul style="list-style-type: none">•E-mail on the webpage,•Email to rsj@consystemec.com or•FAX to 914-248-5840.
5	12/21 – 12/31/2008	Delivery of Final New York Statewide Services ITS Architecture, Web Site, and Documentation

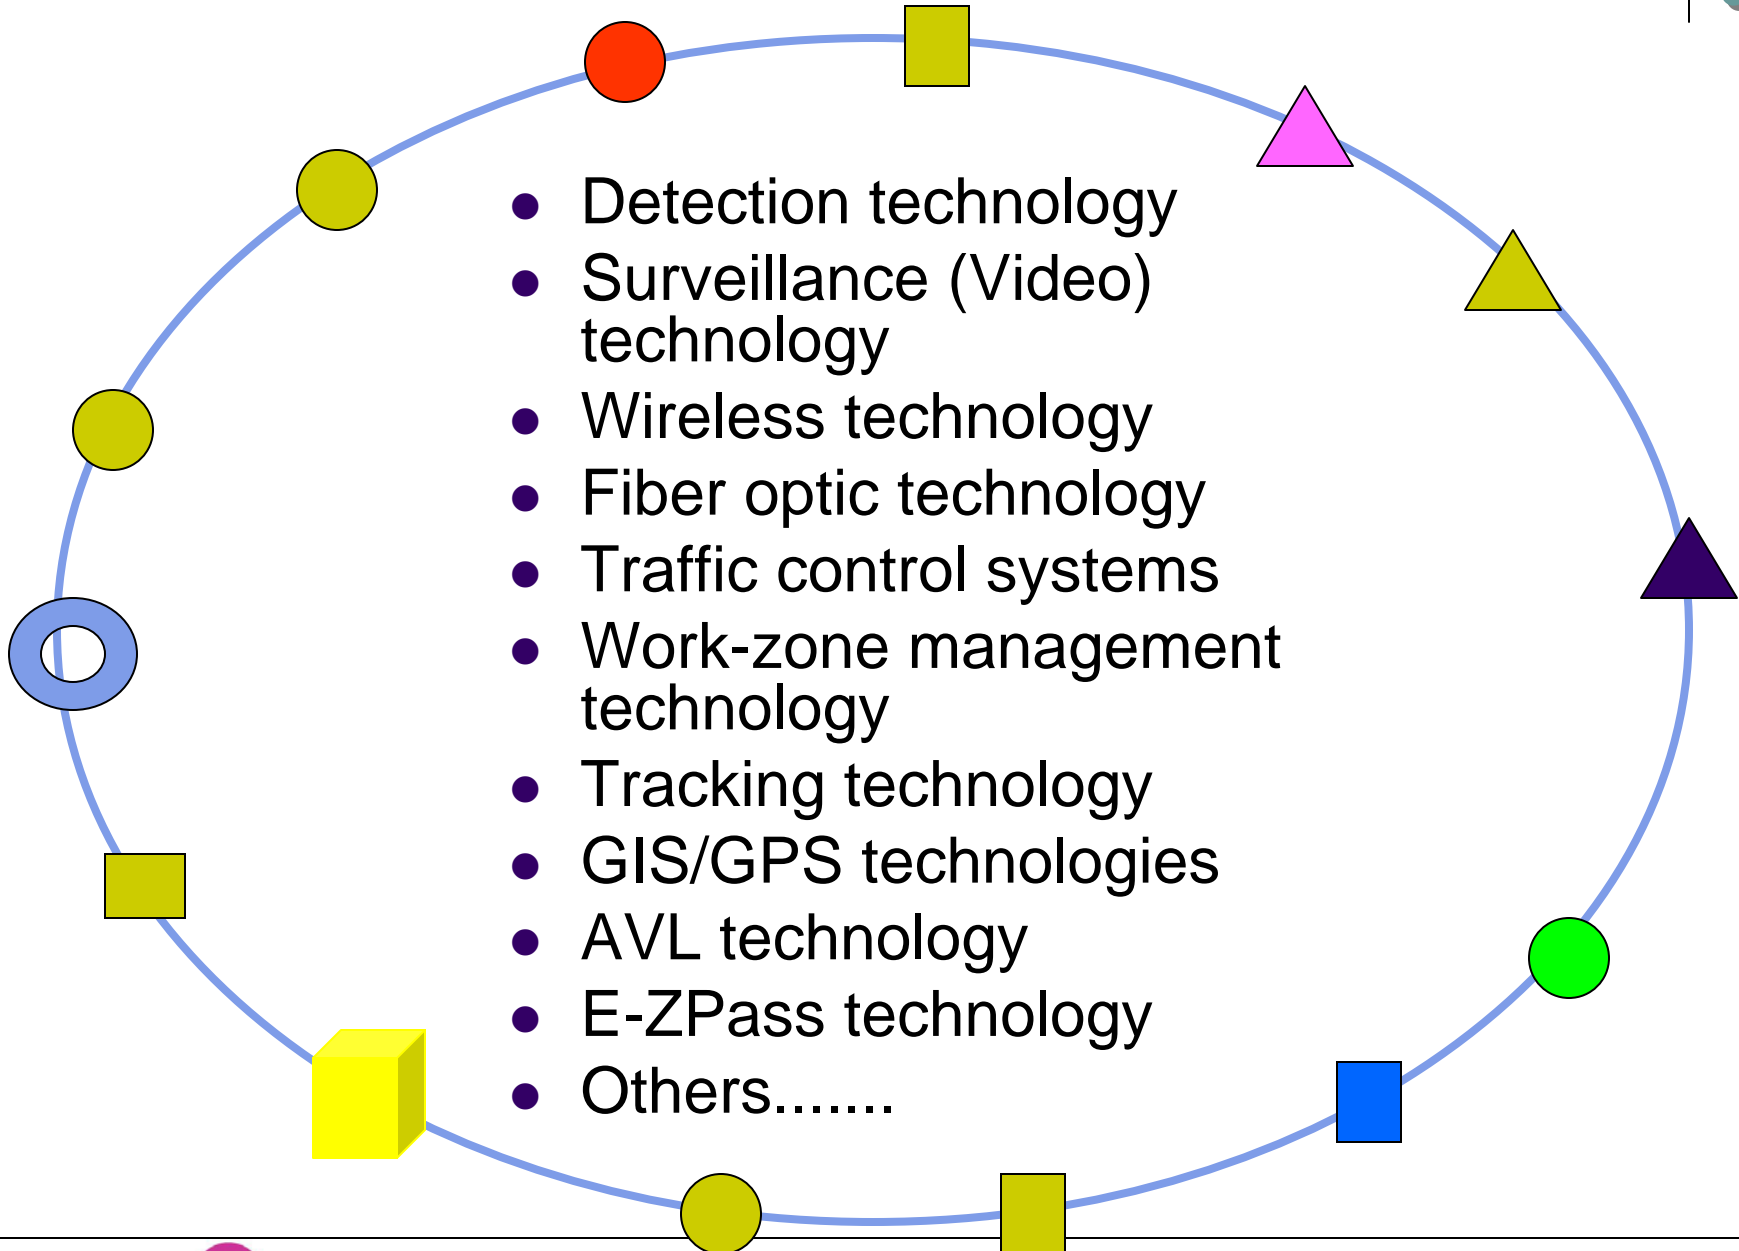

Item 3: ITS Architecture Briefing

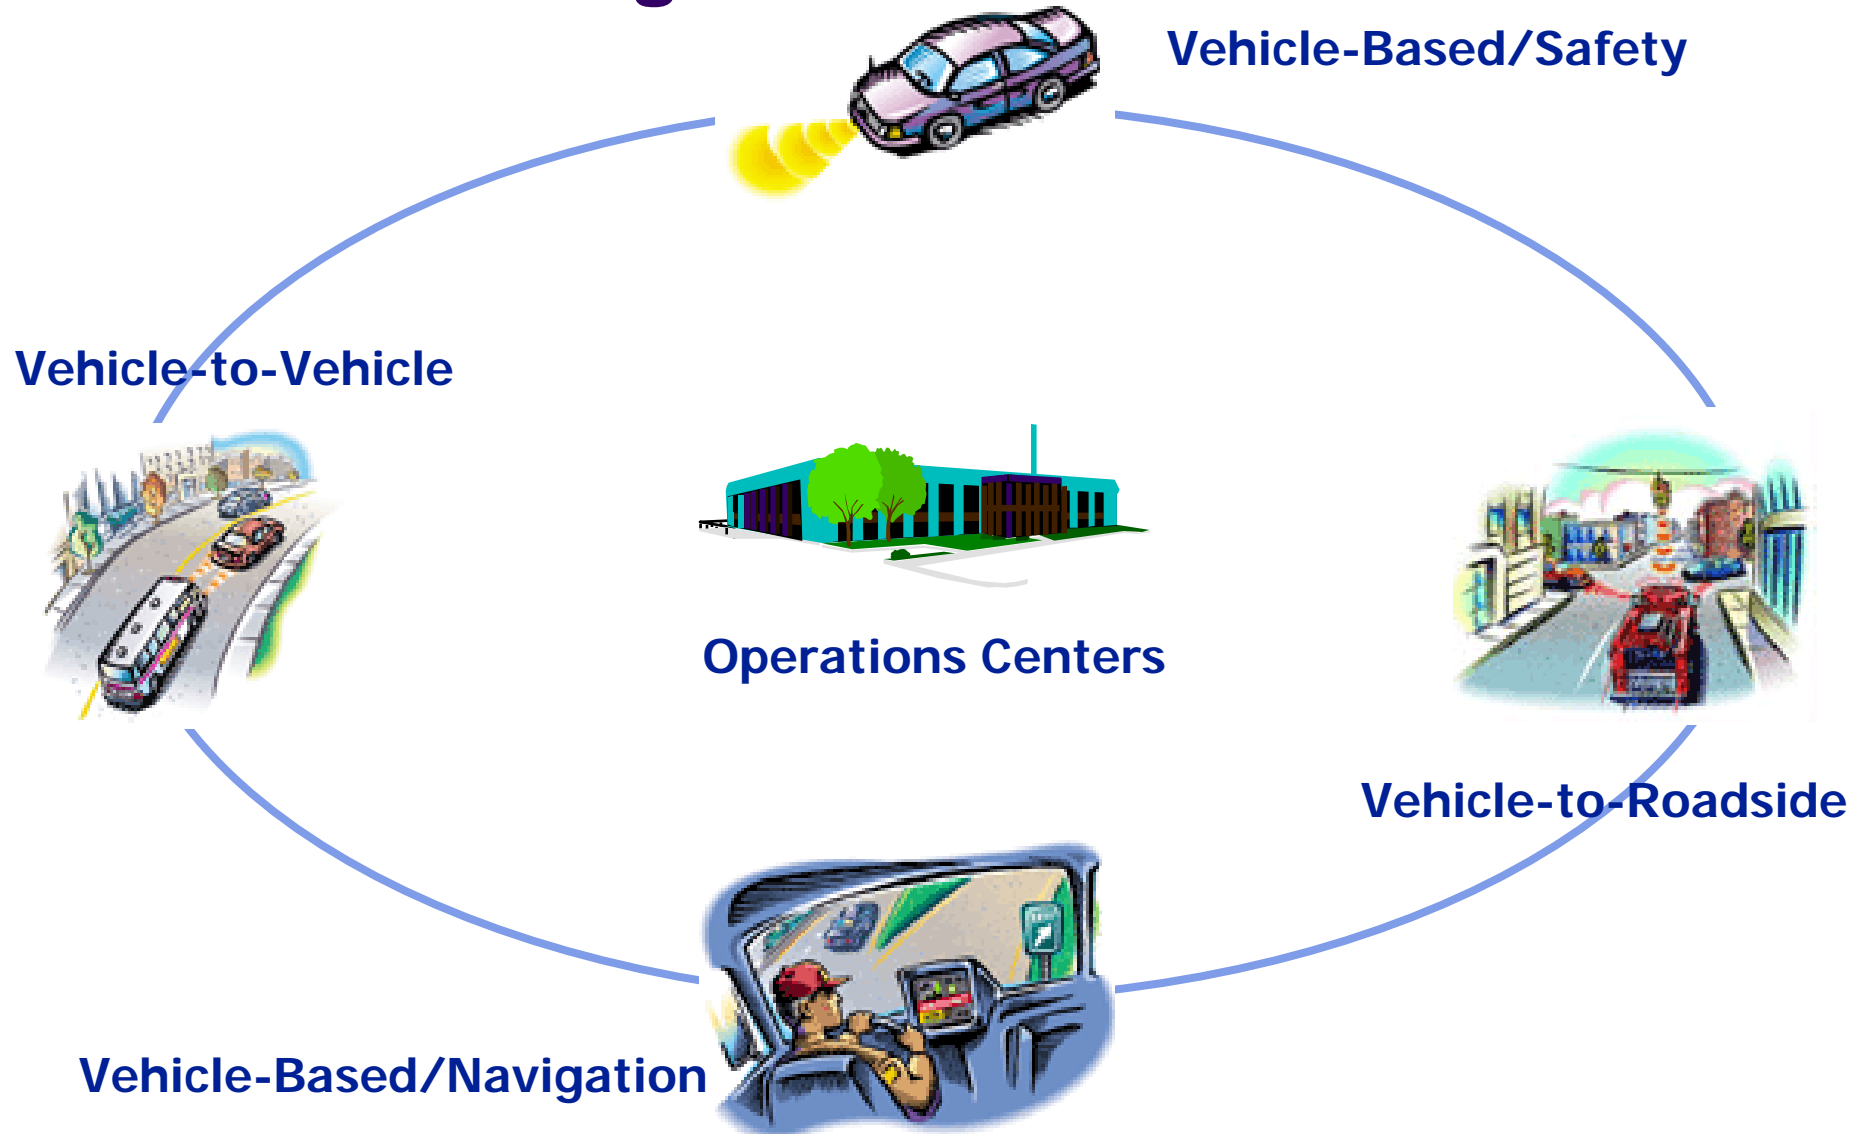

Item 3.1: What is an ITS Architecture

There are many technologies used in ITS

How do we PLAN to use and integrate these technologies in ITS?

The National ITS Architecture is a Framework to Help:

- Describe *services*
- Define *interfaces* between subsystems
- Develop blueprint for *integration*

- Encourages a Systems Engineering Approach:
 - Needs → Services → Functions → Design

National ITS Architecture Layers

- Defines physical entity interfaces
- Distributes functionality
- 3 layers

Communications Layer

- **How information is transferred between ITS elements**

Transportation Layer

- **What ITS elements transfer what information**

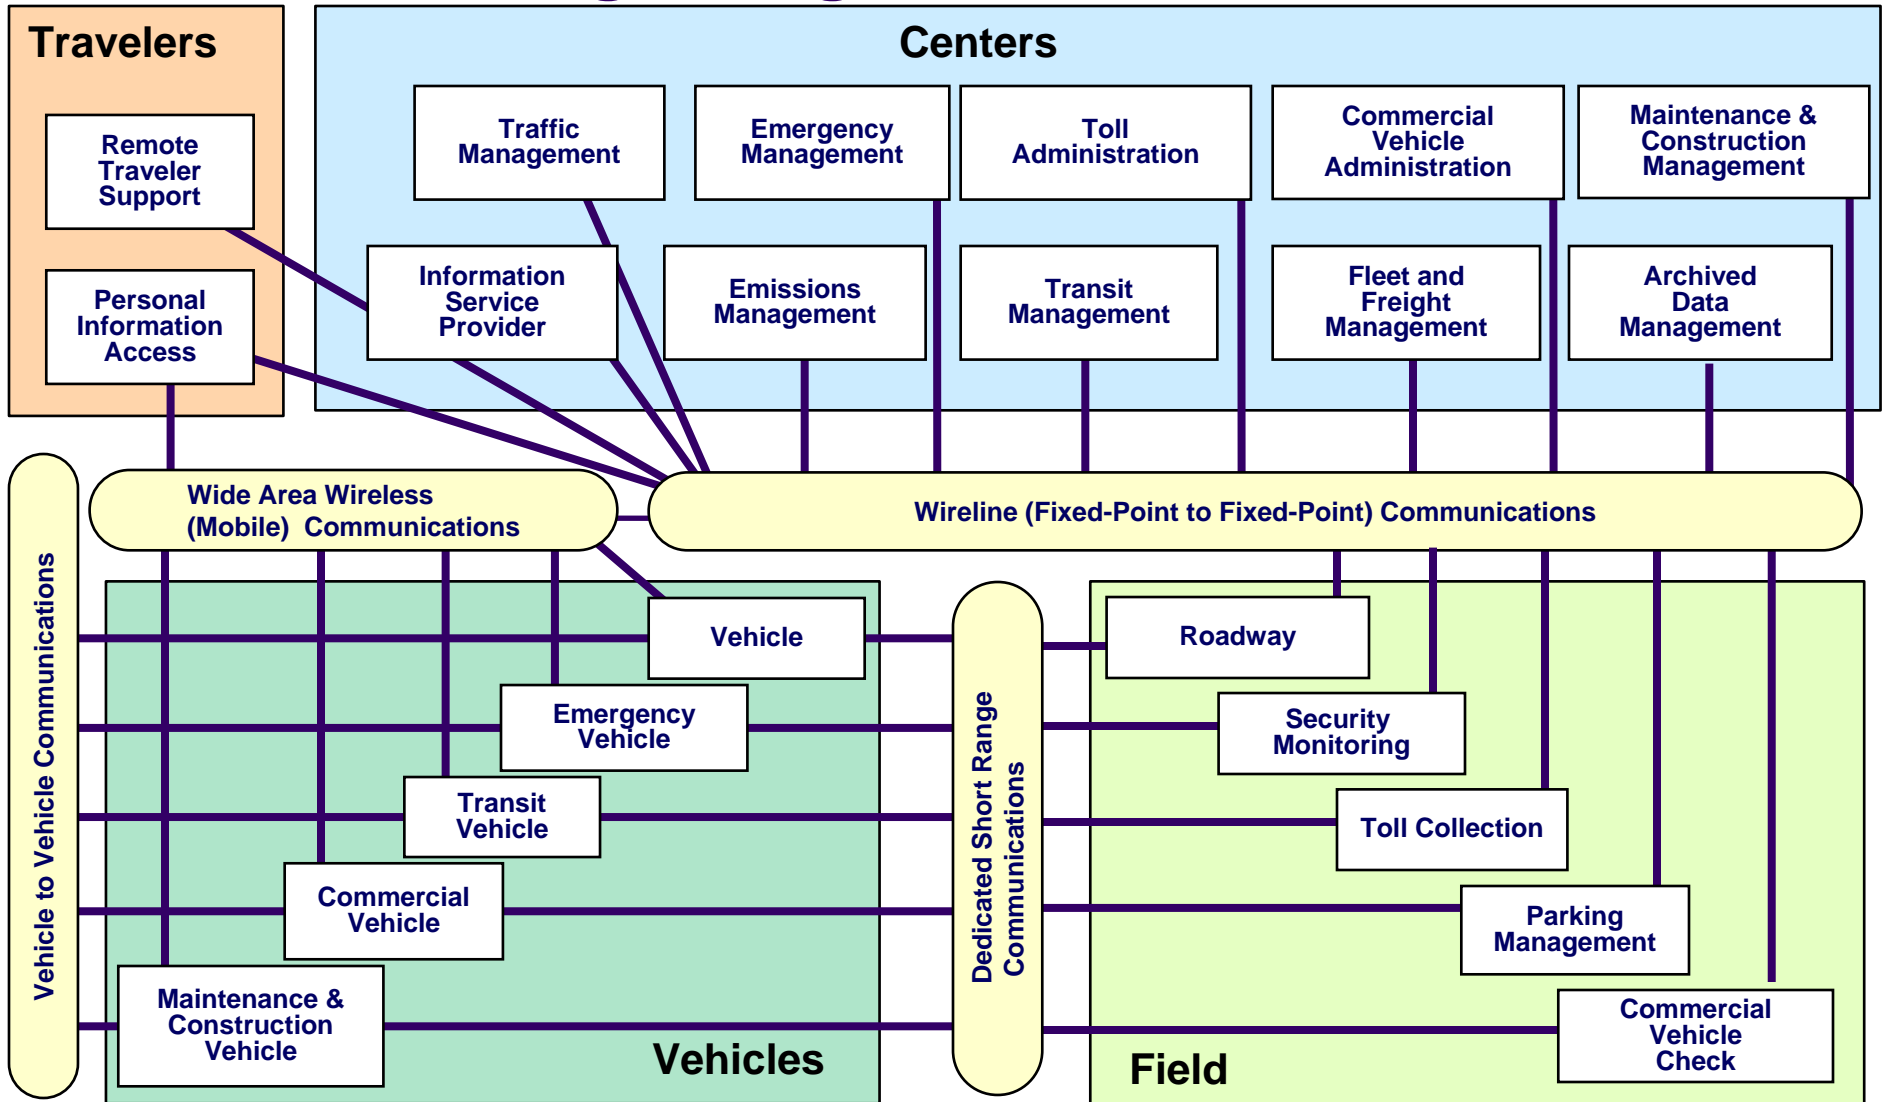

Institutional Layer

- **Supporting institutional structure, policy, and strategies**
- **Stakeholder Driven**

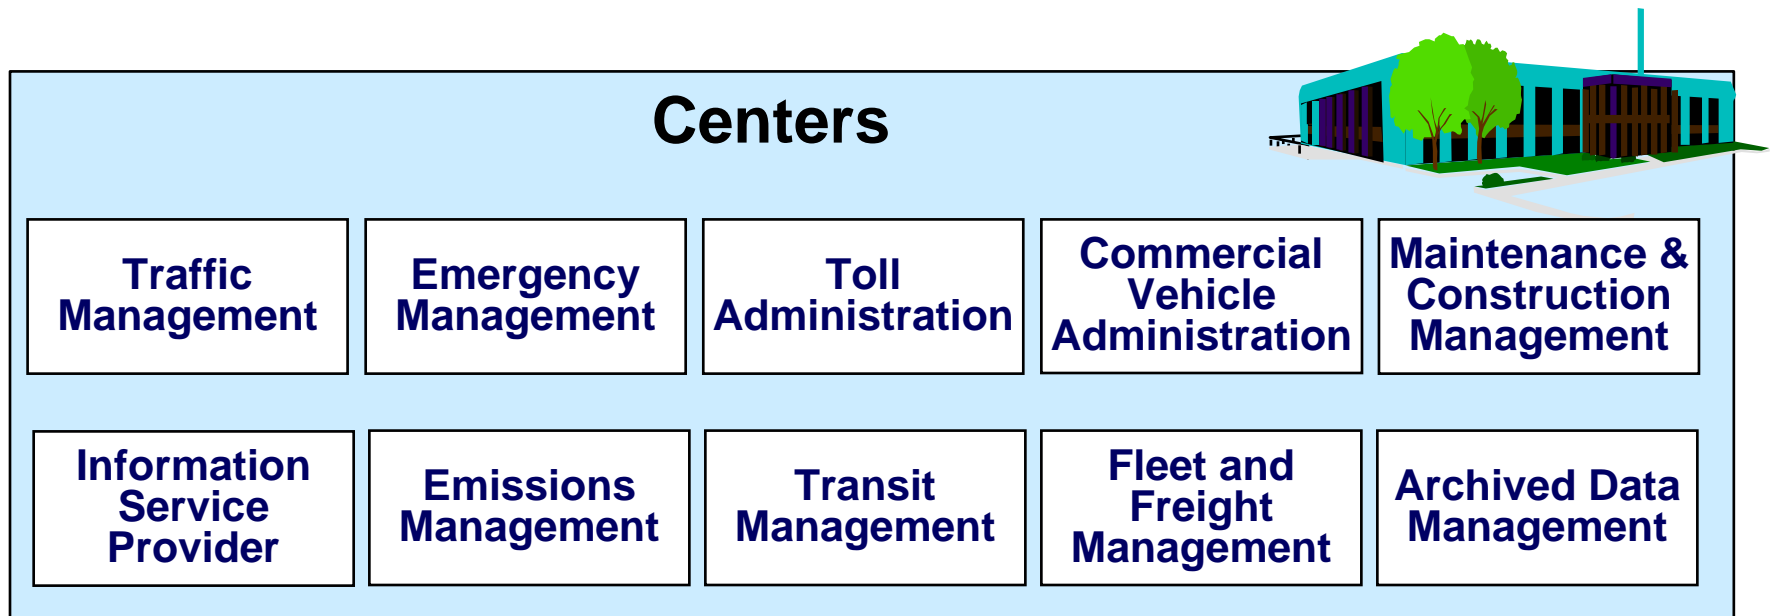

National ITS Architecture

V 6.0 - "Sausage Diagram"

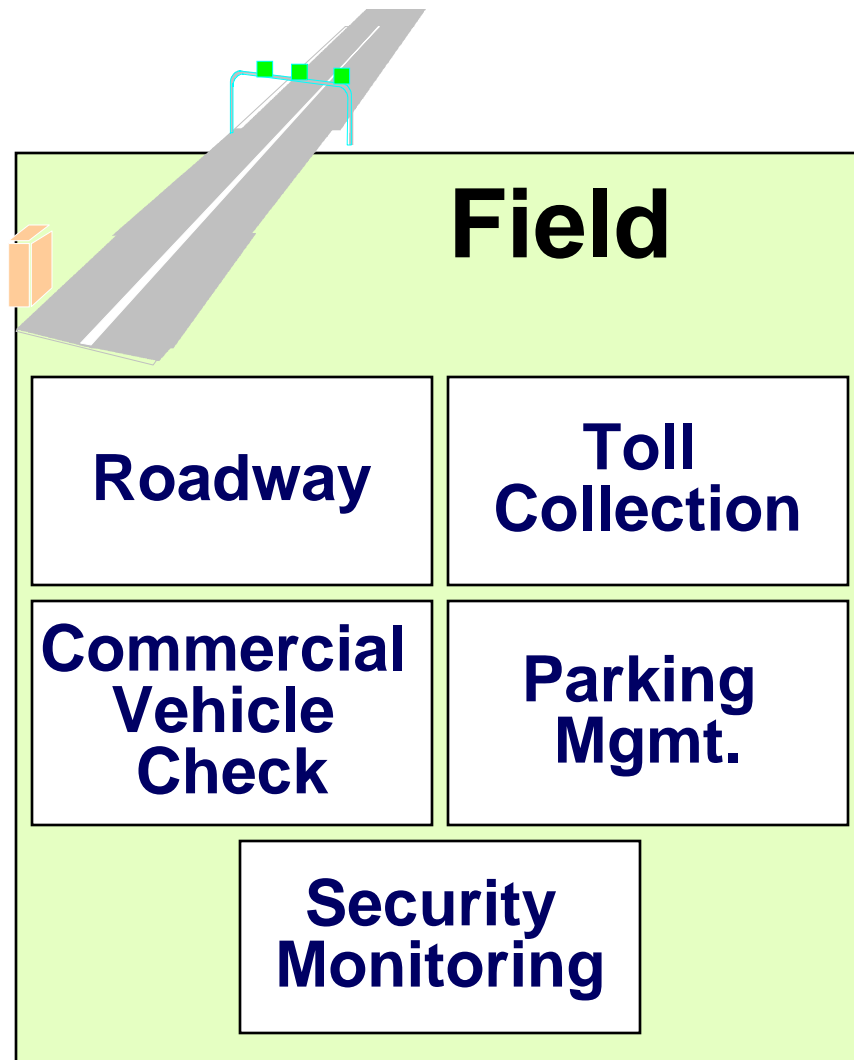

Center Subsystems

- Perform management and administration functions
- Coordinate with other Center Subsystems

Field Subsystems

- *ITS* infrastructure
- *On or along* the transportation network
- Surveillance
- Control plans
- Supply information

Vehicle Subsystems

Vehicles

Vehicle

**Transit
Vehicle**

**Emergency
Vehicle**

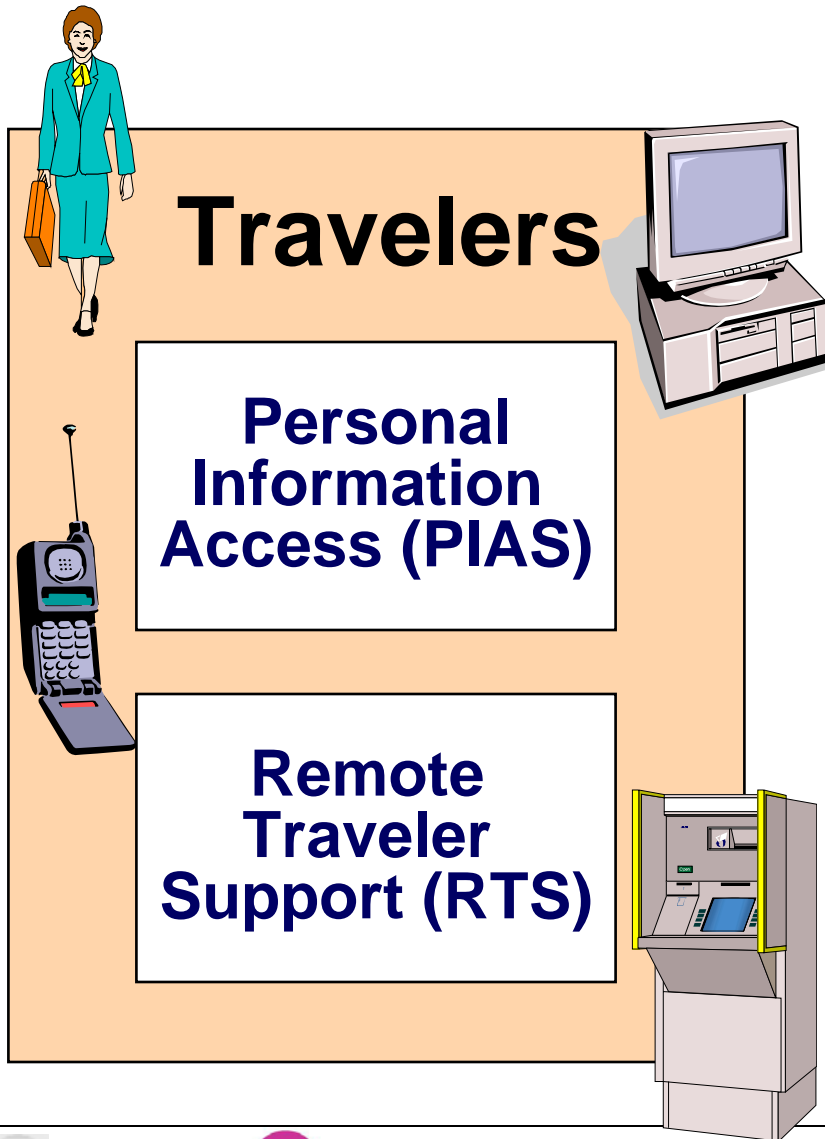

**Commercial
Vehicle**

**Maintenance &
Construction
Vehicle**

Traveler Subsystems

- Equipment To Access ITS Services
- PIAS represents “Personal” Devices
- RTS represents “Public” Devices

Regional/Statewide ITS Architecture

- Is a planning tool for implementing ITS within a region or state
- Uses the National ITS Architecture as a template – borrowing concepts, functional requirements, information flows, etc.

... the National ITS Architecture is tailored to meet the needs of a region/state in the form of a Regional/Statewide ITS Architecture

Regional/Statewide ITS Architecture Scope

- Geographic Boundaries
- ITS Services to be provided
- Time Frame
 - Existing Today → 10 to 15 years in the future

FHWA Rule 940/FTA Policy

Regional ITS Architecture Requirements (23 CFR 940.9)

1. Description of the region
2. Identification of participating agencies and other stakeholders
3. Operational concept
4. Agreements required for implementation
5. System functional requirements
6. Interface requirements
7. Identification of ITS standards
8. Sequence of projects required for implementation
9. Process for maintaining your Regional ITS Architecture

FHWA Rule 940/FTA Policy

Systems Engineering Analysis Report (23 CFR 940.11)

- Any *ITS project*, that receives federal aid and that moves into design, is required to follow a systems engineering analysis
- ITS project: the project or part of the project implements one or more ITS user services (see <http://www.iteris.com/itsarch/documents/userservices/userservices.pdf>)

FHWA Rule 940 Systems Engineering Analysis

(parts in italics come from your regional/statewide ITS architectures)

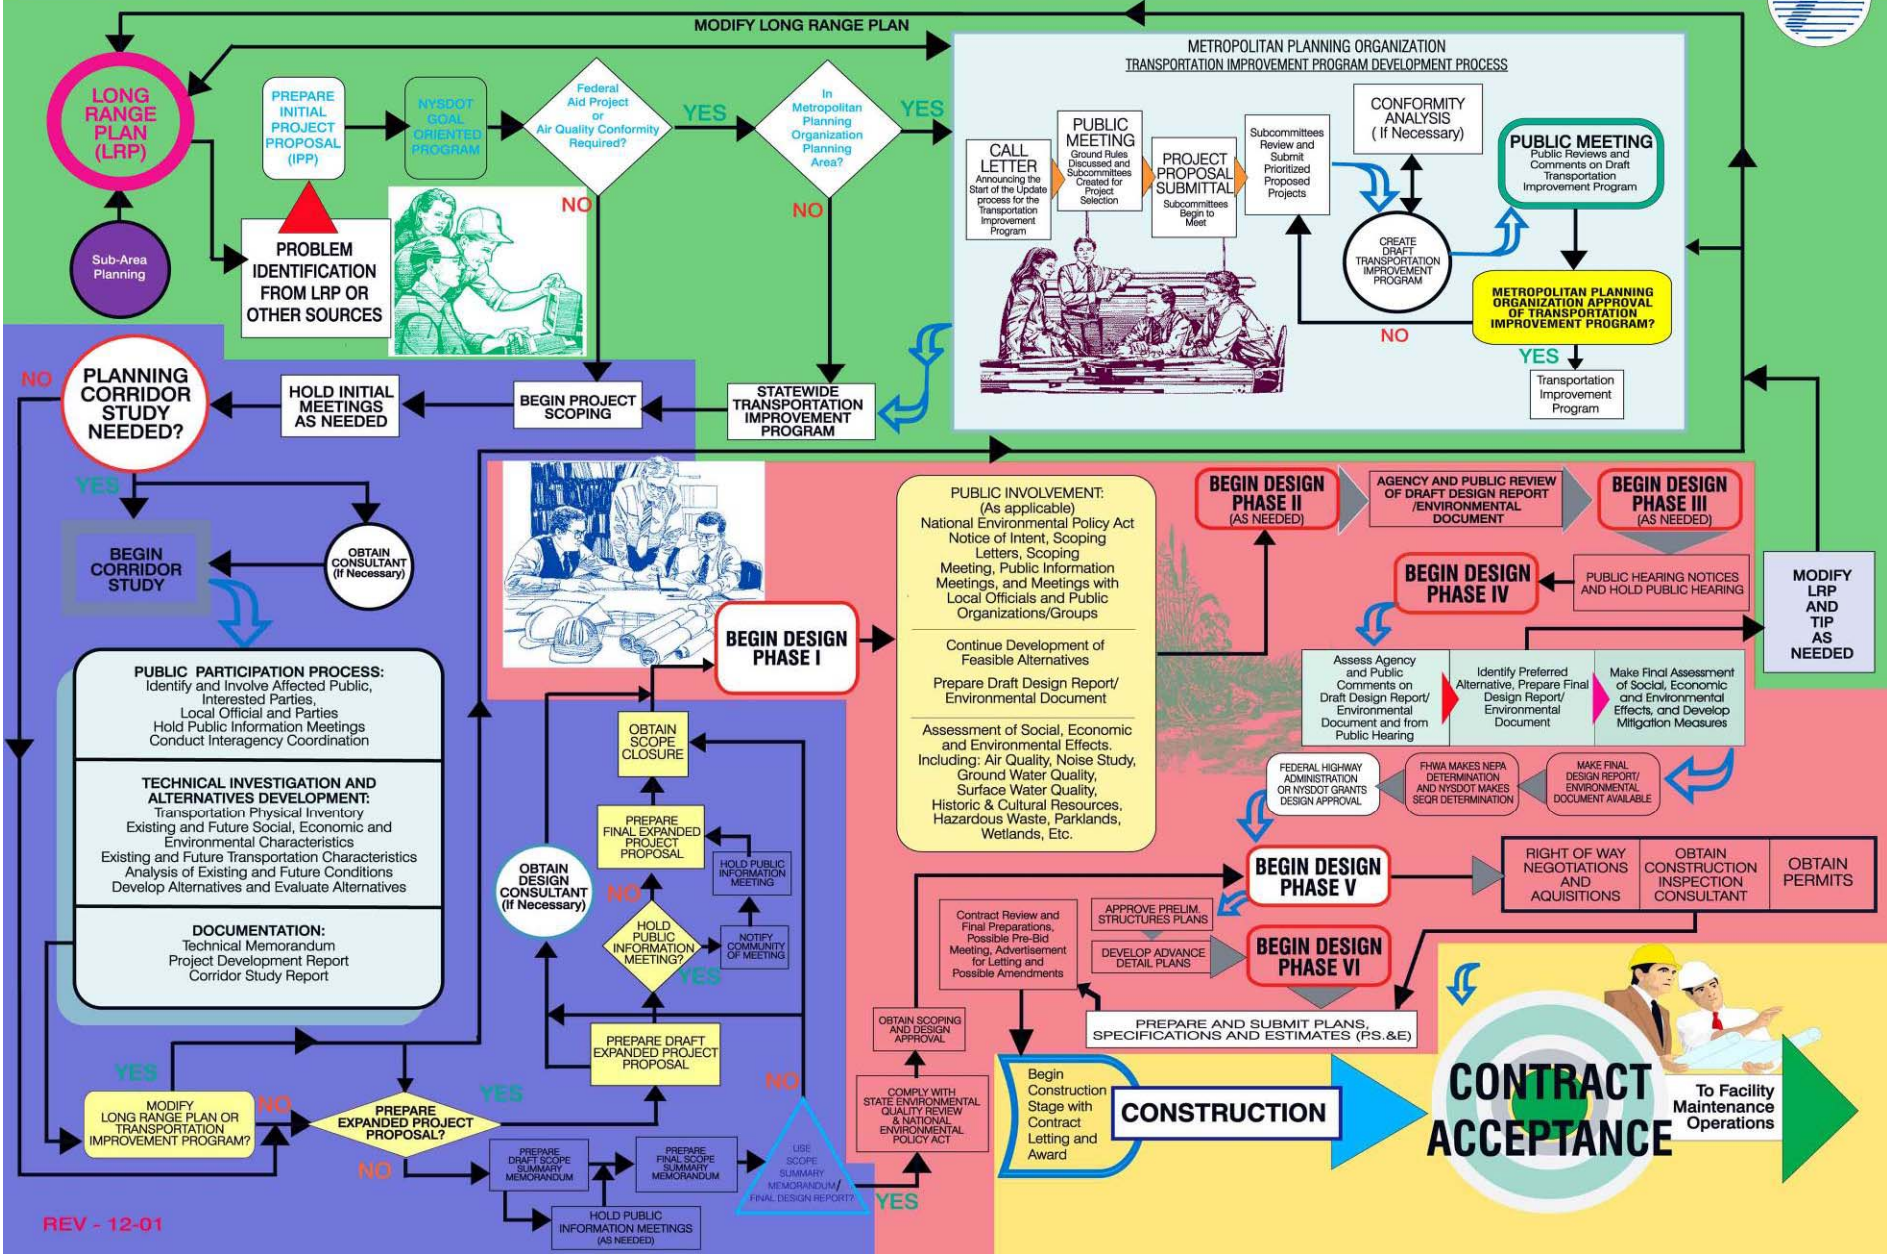

- 1. Identification of portions of the regional architecture being implemented*
- 2. Identification of participating agencies roles and responsibilities*
- 3. Requirements definition*
4. Analysis of alternate system configurations and technology options to meet requirements
5. Procurement options
- 6. Identification of applicable standards and testing procedures, and*
7. Procedures and resources necessary for operations and management of the

Item 3.2:

Using the ITS Architecture to support the NYSDOT Project Development Process

NYS DOT PROJECT DEVELOPMENT PROCESS

REV - 12-01

ITS System Journey from Plan to Deployment

Regional Transportation Plan

Alternatives Analysis (High Level Design)

Use Cases & Requirements

Alternatives Analysis

ITS Architecture

Data Storage Retrieval

\$\$\$\$\$

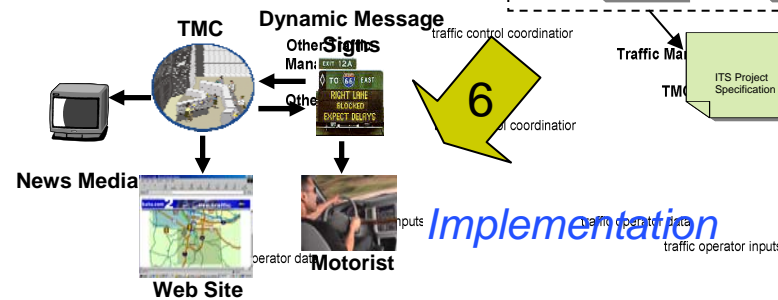

Concept of Operations

Specifications and Test Plans

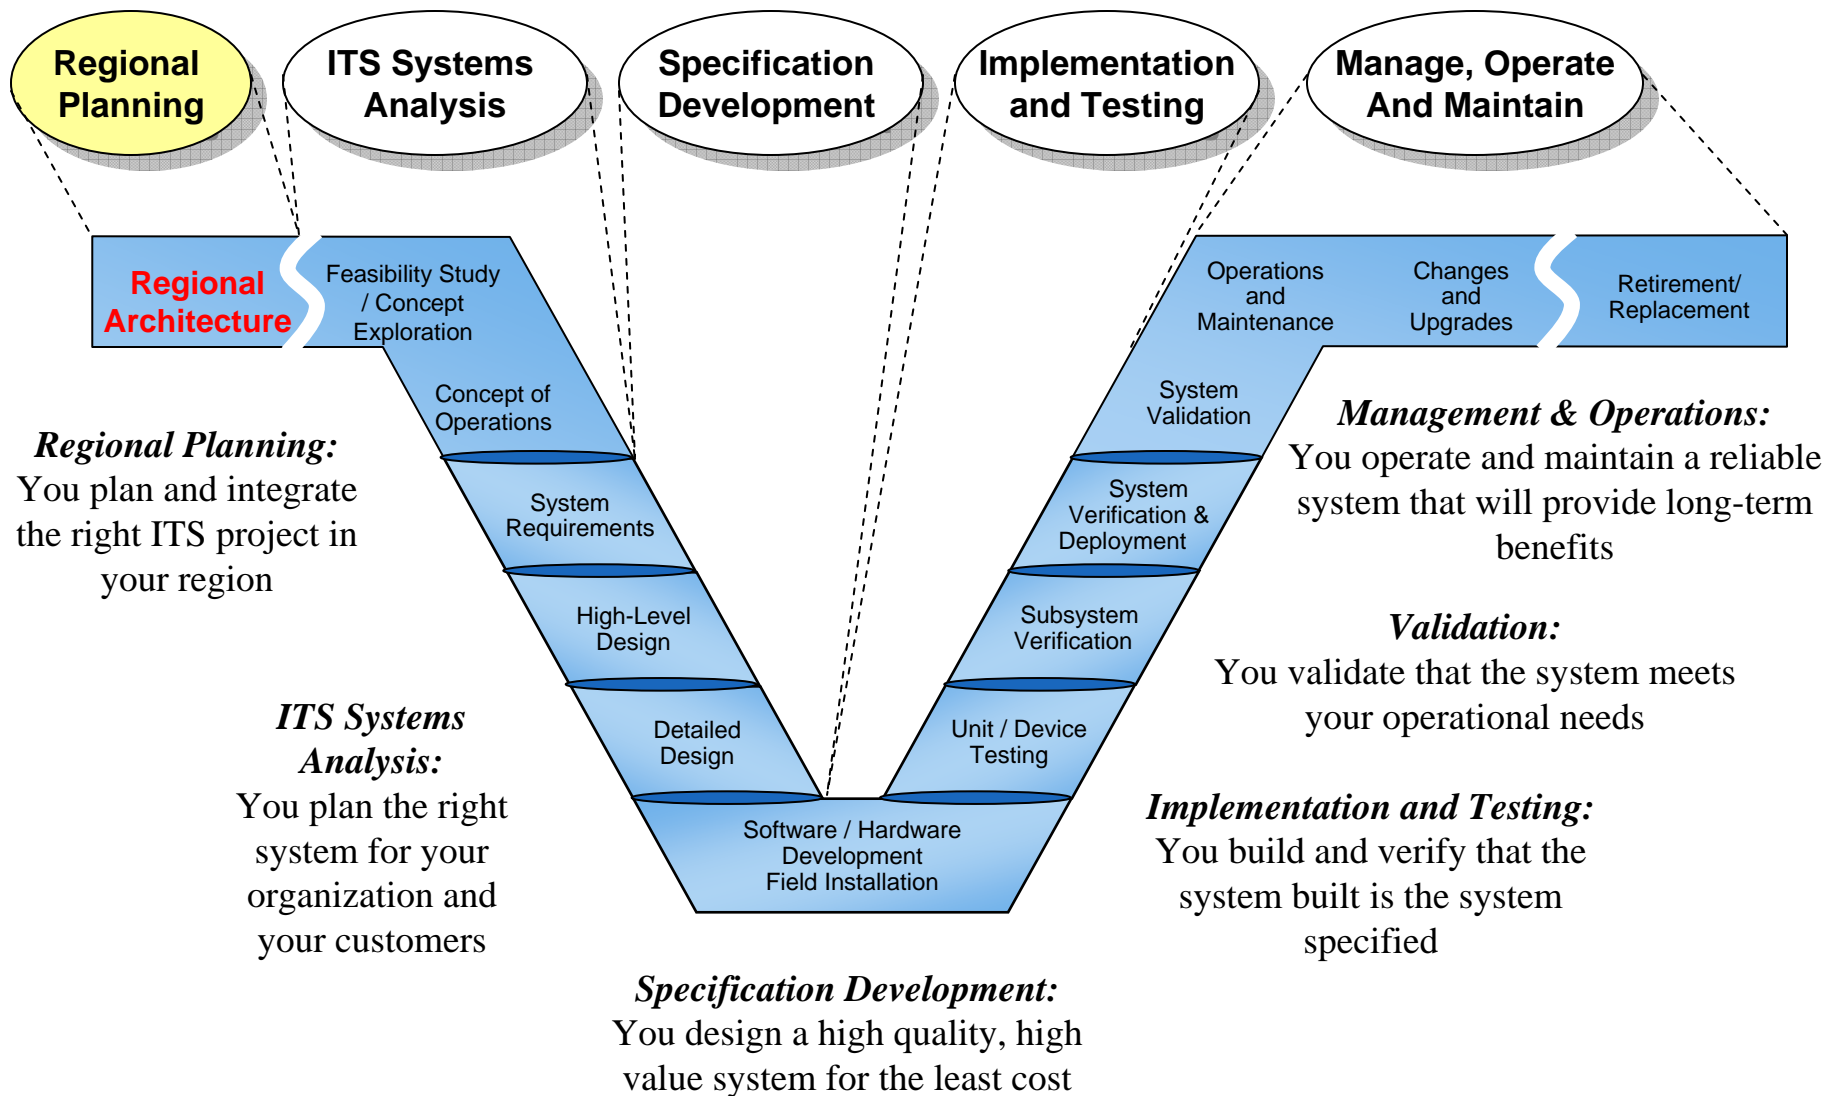

Requirements

Implementation

Statewide ITS Architecture initiates the Systems Engineering that supports you through the ITS System Development Life Cycle

Key Systems Engineering Deliverables as related to the NYSDOT Project Development Process

NYSDOT Project Development Process	Systems Engineering Deliverables	Regional/Statewide ITS Architecture “Products”
Transportation Planning	<i>Regional/Statewide ITS Architecture</i>	<i>Project Identification, Priority, and Sequence</i>
Initial Project Proposal / Project Scoping	Concept of Operations	<i>Market Packages in System Overview</i>
Design Report	Requirements	<i>High Level Functional Requirements</i>
Advanced Detail Plans (ADP) & Plans, Specifications & Estimates (PS&E)	Specifications	<i>ITS Standards Identification</i>
Construction	Test Documentation	

Item 3.3: Using the ITS Architecture – ITS Standards Identification and Specification

Modeling ITS Architecture Solutions: *Market Packages*

- The National ITS Architecture introduced the term *Market Package*
- Market Packages illustrate ITS elements that can be grouped to provide ITS services to transportation system users.

Market Packages

Architecture

Framework spanning all of ITS

Market Packages

Pieces of the architecture that provide a particular transportation service.

Moving Standardized Information between ITS Elements: *Architecture Flows*

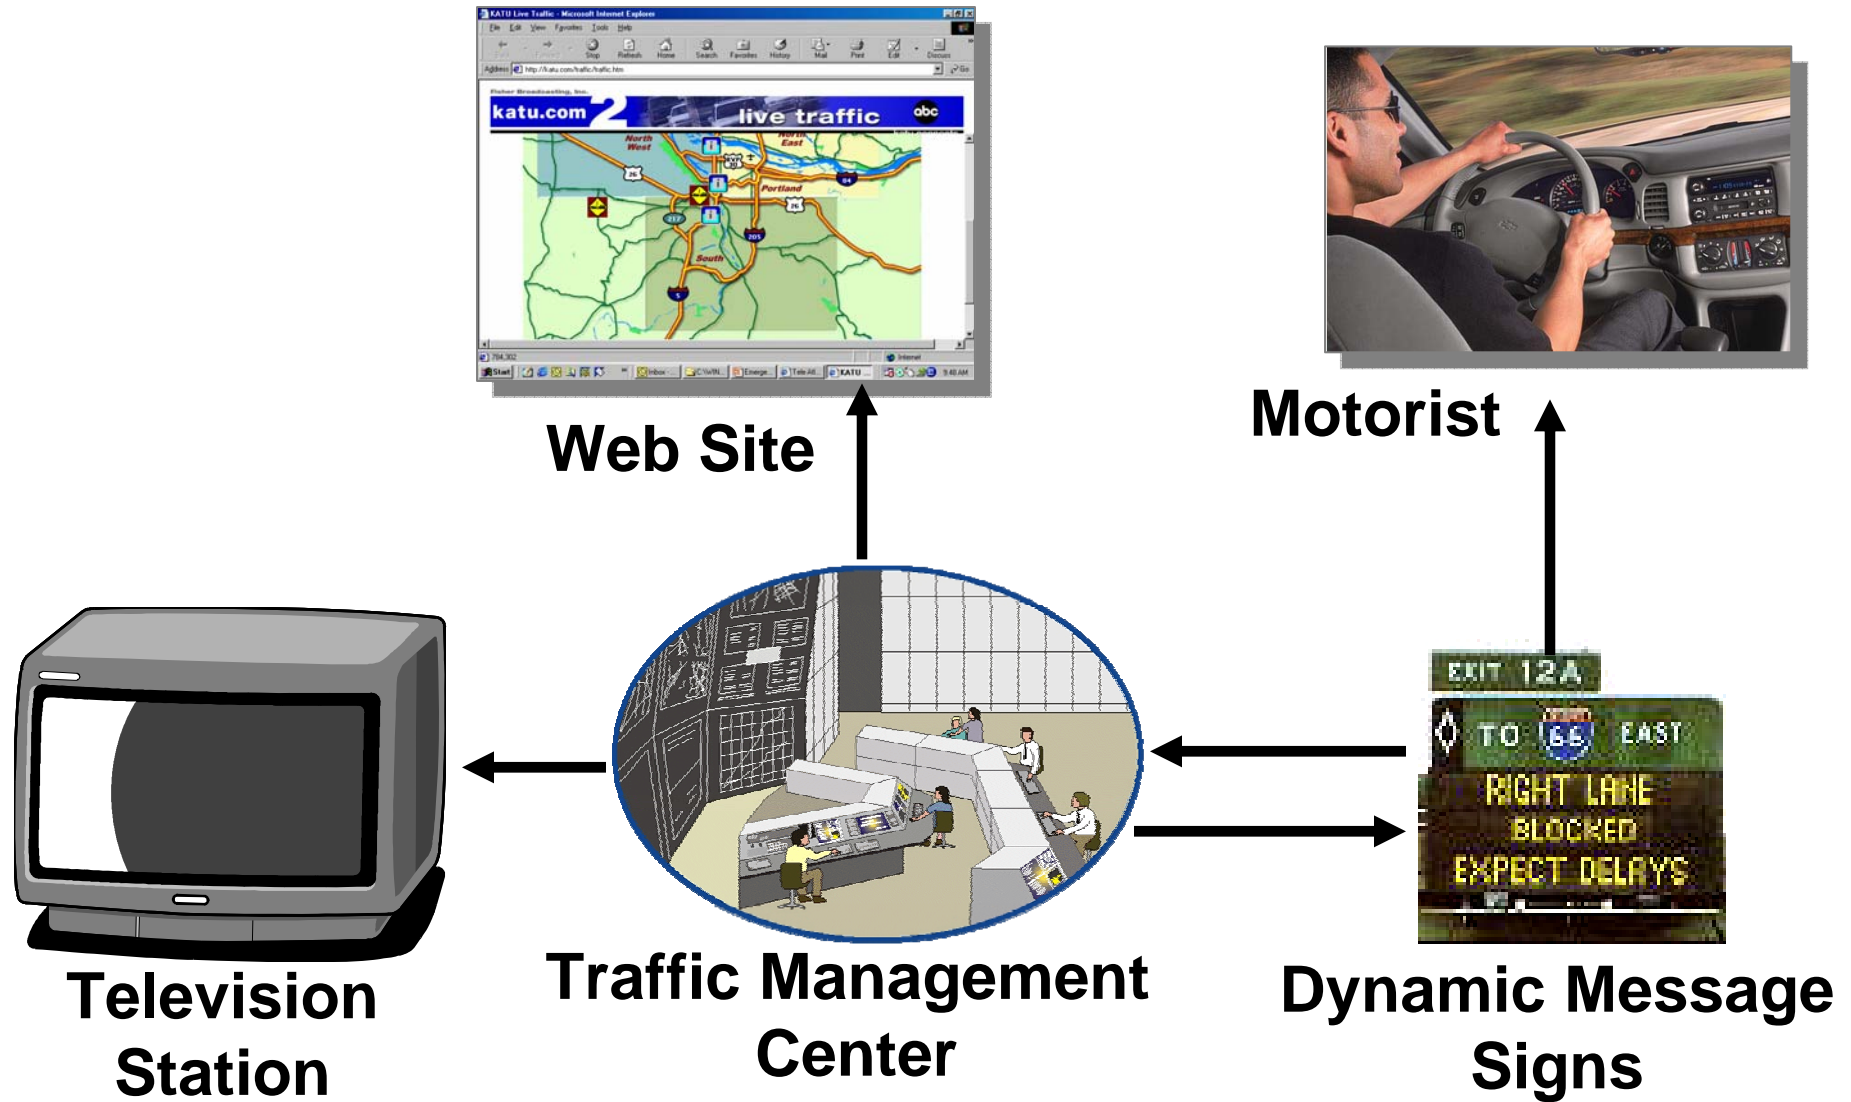

- *Architecture Flows*

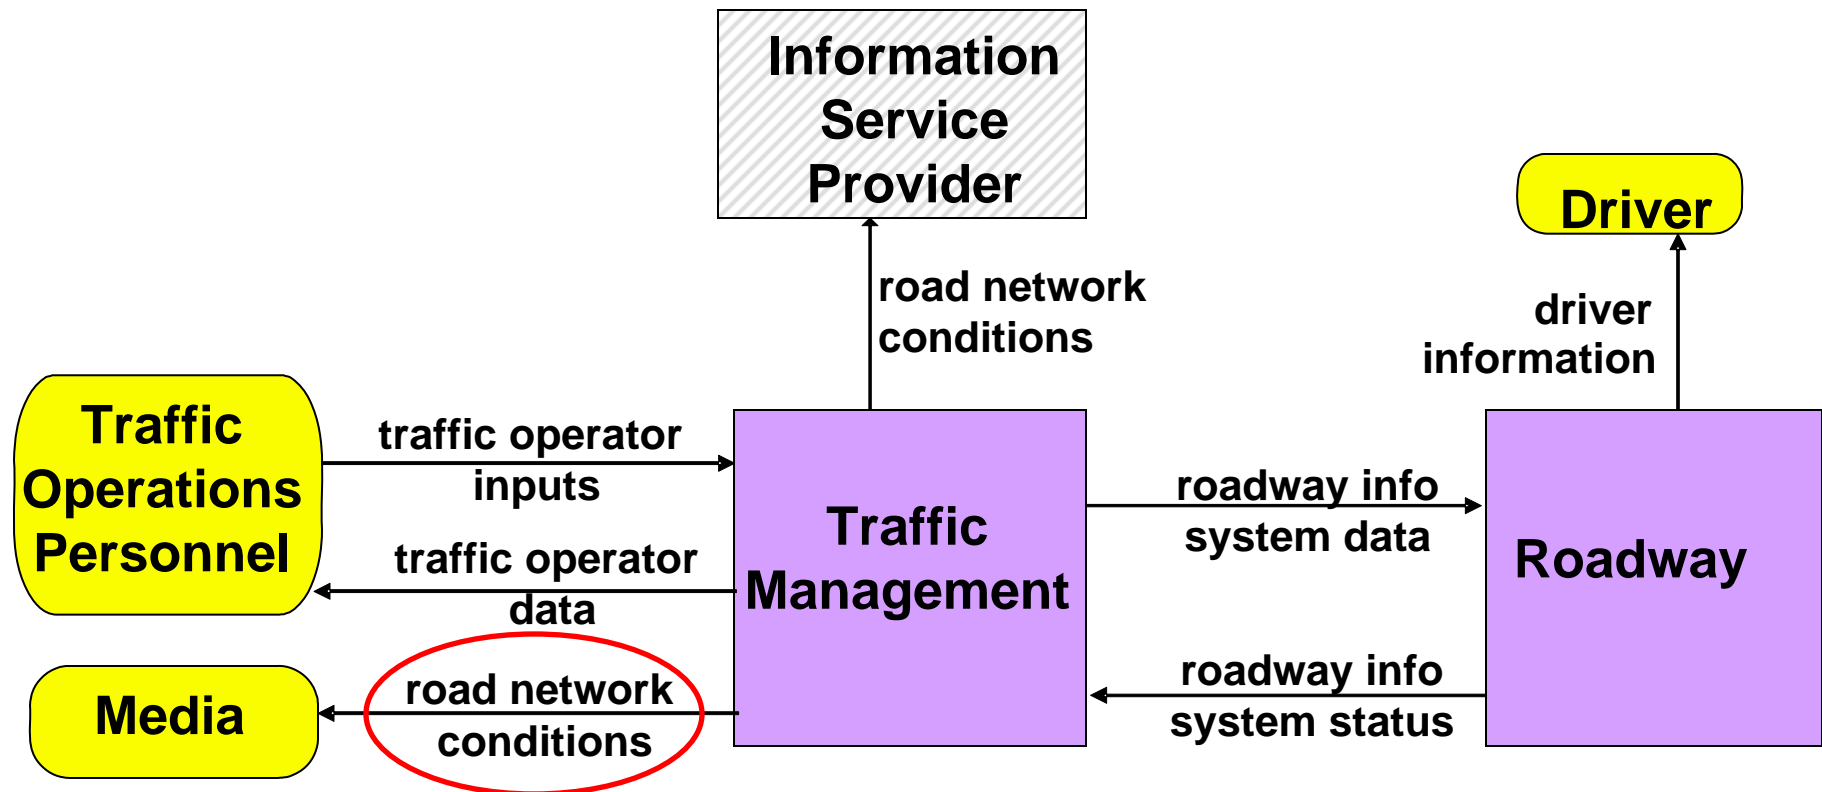

- Identify the expected types of information messages that flow between ITS elements
- Provide a high-level mapping to ITS standards

... let's look at a few examples

Traffic Information Dissemination

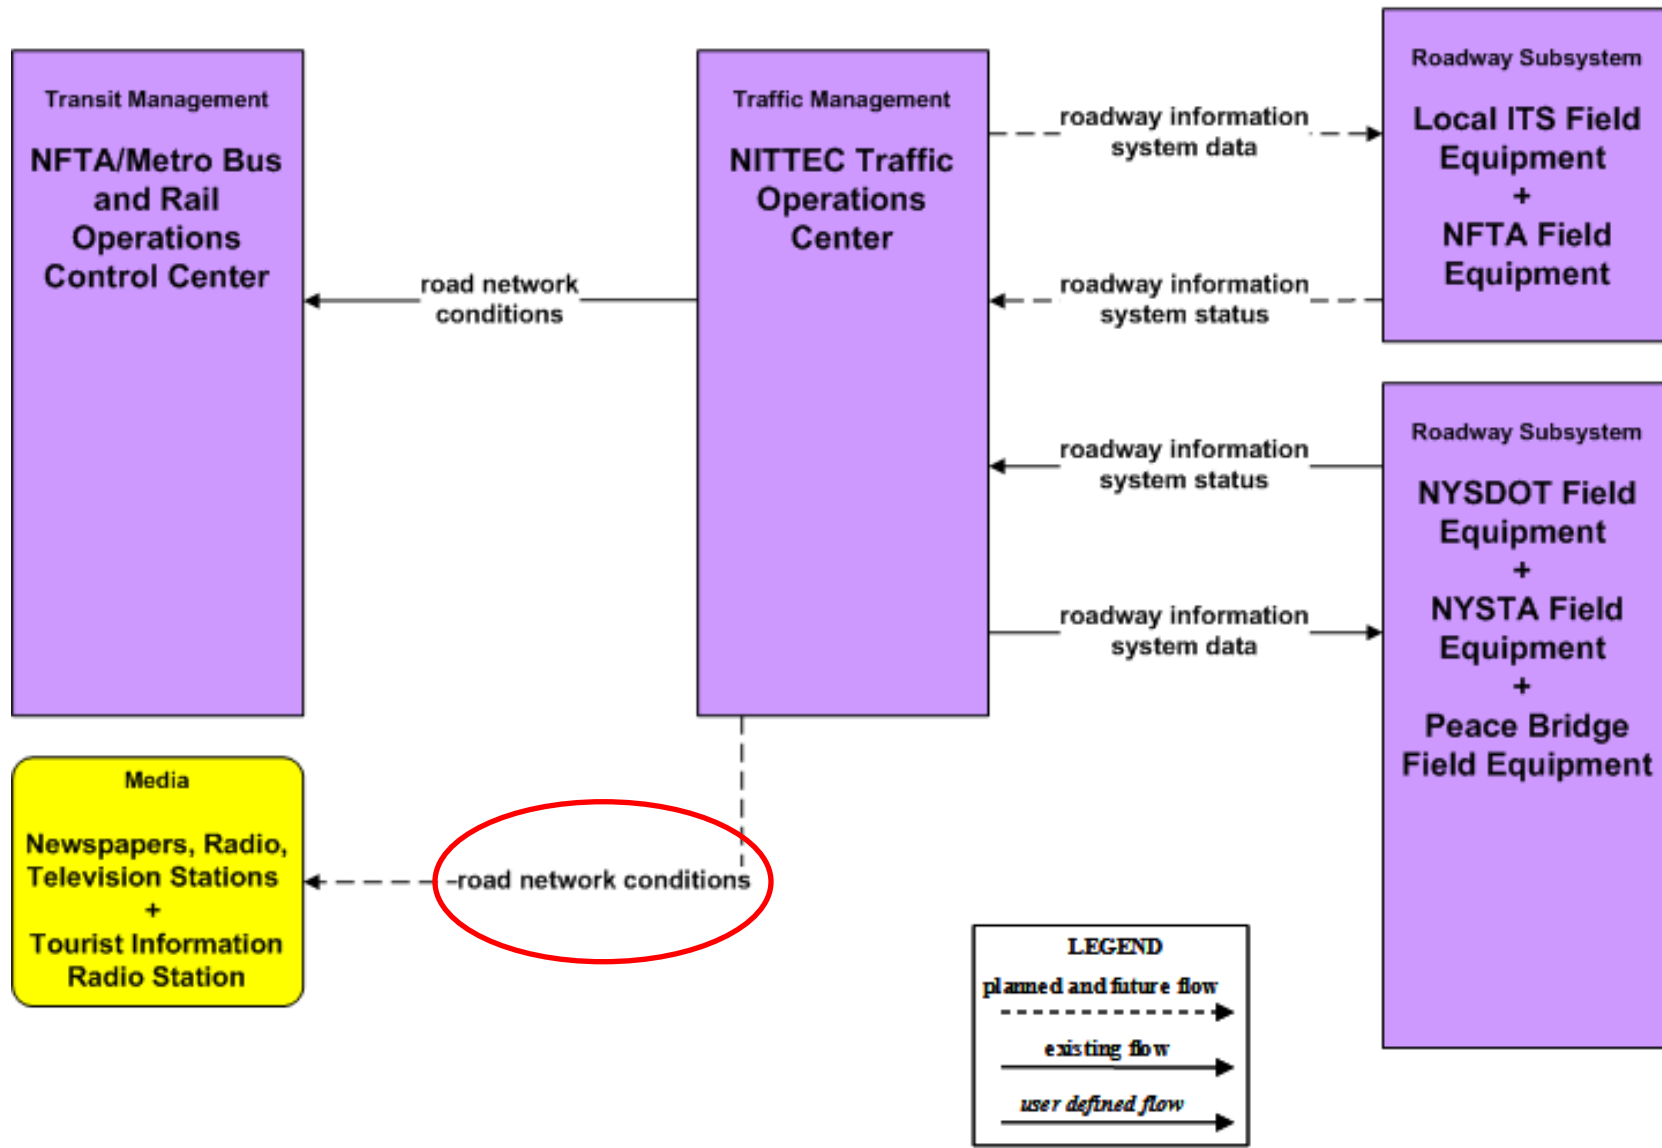

ATMS06 – Traffic Information Dissemination [National ITS Architecture]

We'll track *road network conditions* from National ITS Architecture to Regional ITS Architecture and identify applicable ITS standards

ATMS06 - Traffic Information Dissemination
NITTEC

Buffalo/Niagara Region

Example ITS Architecture Flow Mapping to ITS Standards [National ITS Architecture 6.0]

- road network conditions
 - NTCIP C2C: NTCIP Center-to-Center Standards Group
 - ITE TMDD 2.1: Traffic Management Data Dictionary and Message Sets for External TMC Communication (TMDD and MS/ETMCC)

Item 4: Review of ITS Architecture Ambiguities and Inconsistencies

NYSDOT IEN – Resolution of Ambiguities and Inconsistencies (1 of 3)

- The consultants believe that the NYSDOT IEN represents an ITS element used for the purposes of inter-regional communication, and statewide aggregation. However, during the review meetings, the IEN was suggested for intra-regional communications, which the consultants believe is the intended purpose of the Regional TOC. For example, Local Transit and Local DPW would not receive ITS information via the IEN, but via an interface to the RTOC.
 - THIS IS HOW IT IS CURRENTLY SHOWN.

NYSDOT IEN – Resolution of Ambiguities and Inconsistencies (2 of 3)

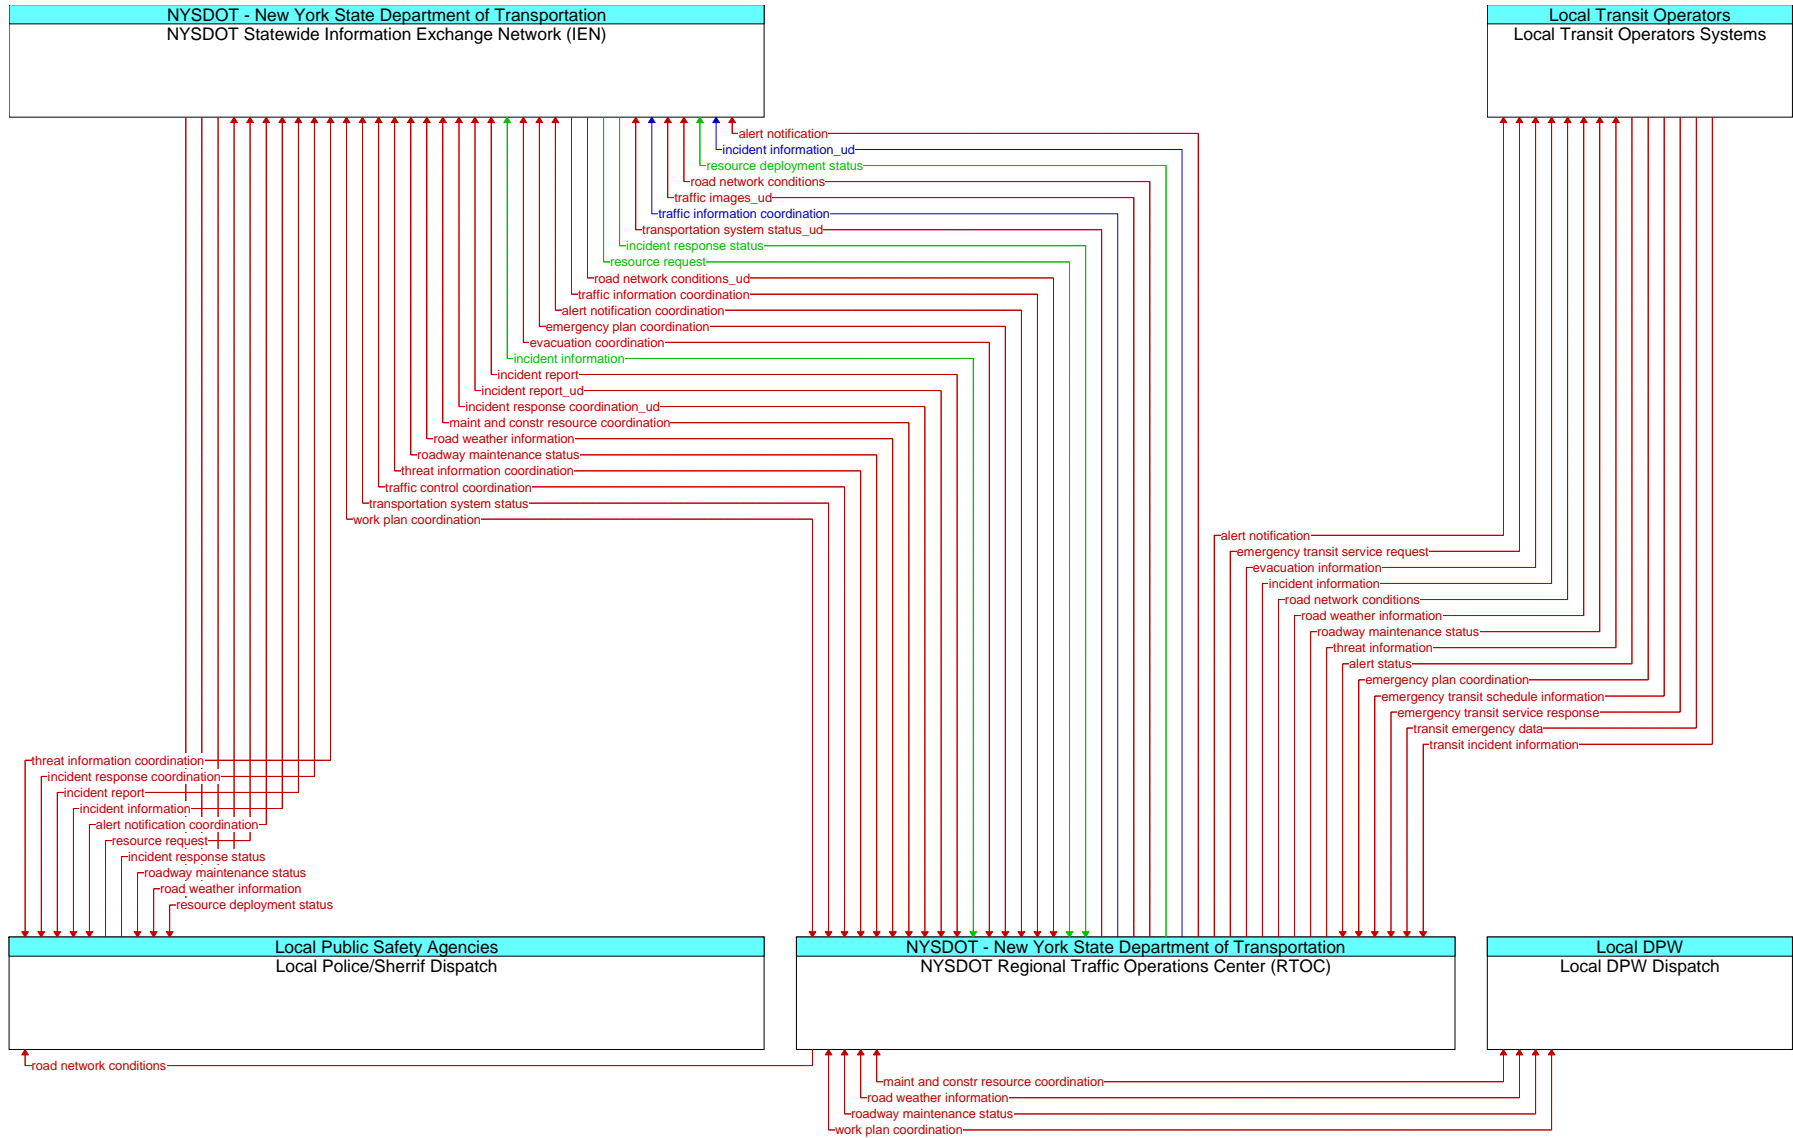

- An ambiguity results in that communication with Local Public Safety is via the NYSDOT IEN to the local RTOC, and possibly all NYSDOT RTOCs.
- The described ambiguity does not mean that a project implementation may not use the IEN software elements to allow exchange of information between local ITS providers (for example transit and law enforcement) information to an RTOC. The IEN design describes an “I3B” software element that is suitable for intra-regional communications. In fact, this is the design carried out in several regions.

NYSDOT IEN – Resolution of Ambiguities and Inconsistencies (3 of 3)

- From an architecture perspective, the consultants would like to clarify that local ITS elements (including public safety) connect to the RTOC, then the RTOC (possible packaging information from various local sources) would distribute ITS information to other regions via the IEN.
- Therefore, it is suggested to show local public safety connecting directly to the RTOC (minus showing the IEN detail).

NYSDOT IEN – Example of how things are connected now

Item 5: Web Site Demonstration

Demonstration Points

- Navigating to a Project Description and ITS Elements
- Navigating to a Stakeholder and ITS Element's Description
- Navigating to an ITS Element's Context Diagram
- How to send your comments using the e-mail hyperlink
- Navigating to a PDF Version of Project Documents

Item 6: Maintenance Plan

NYSDOT Statewide Services ITS Architecture Maintenance Plan

- Rule 23 CFR 940.9
 - Requires that each region and its stakeholders must have a plan to maintain the regional ITS architecture
- Defines a formal process to update the Statewide Services ITS architecture to reflect changes in ITS capabilities, goals, projects and plans.
 - Define Change Management Process
 - Define policies related to access/distribution/use of information content of the regional ITS architecture

NYSDOT Statewide Services ITS Architecture Maintenance Plan

- Roles and Responsibilities
 - Steering Committee
 - NYSDOT and NYSTA managers responsible for ITS project initiatives from creation, funding and project development
 - Responsible Agency
 - Contracting agency
 - Allocates resources, maintains the “records”
 - Maintenance Manager
 - Coordinates maintenance activities, maintains Change Request Forms and Change Request Database
 - Manages Consultant

NYSDOT Statewide Services ITS Architecture Maintenance Plan

- Roles and Responsibilities
 - Maintenance Working Group
 - Provides oversight for completeness and appropriateness
 - Possibly consider points of contact for priority projects for this ITS architecture update, a subset of this initial working group, plus NYSTA.
 - Chairperson
 - Calls and leads meetings
 - Reports to Steering Committee
 - Assigned by Steering Committee for one 2-year term
 - Stakeholders
 - Responsible for identifying updates to its projects and elements
 - Assign an Authorized Representative regarding updates and policies

NYS DOT Statewide Services ITS Architecture Maintenance Plan

- Change Management Process
 - When to Update
 - Maintenance Manager to request updates every 3 months
 - Major Revisions may occur every 3-5 years, concurrent with a new TIP, RTP, or Capital Plan
 - Change Request Form
 - Requires signature(s) by the Authorized Representative of all Stakeholder directly affected by the proposed change

NYS DOT Statewide Services ITS Architecture Maintenance Plan

- Submit Change Request Form to Maintenance Manager
 - Enters in the Change Request Database
 - Preliminary Check for completeness and appropriateness
 - Creates a notification bulletin of proposed changes
- Assessment
 - Maintenance Working Group provides oversight
 - Reviews proposed changes for appropriateness

NYSDOT Statewide Services ITS Architecture Maintenance Plan

- Implementation
 - Make agreed changes to the Baseline
 - Update Change Request Database
 - Informs Stakeholders via e-mail
 - Distribute changes
 - Updates Web Site.

Item 7: Wrap-up and Questions?

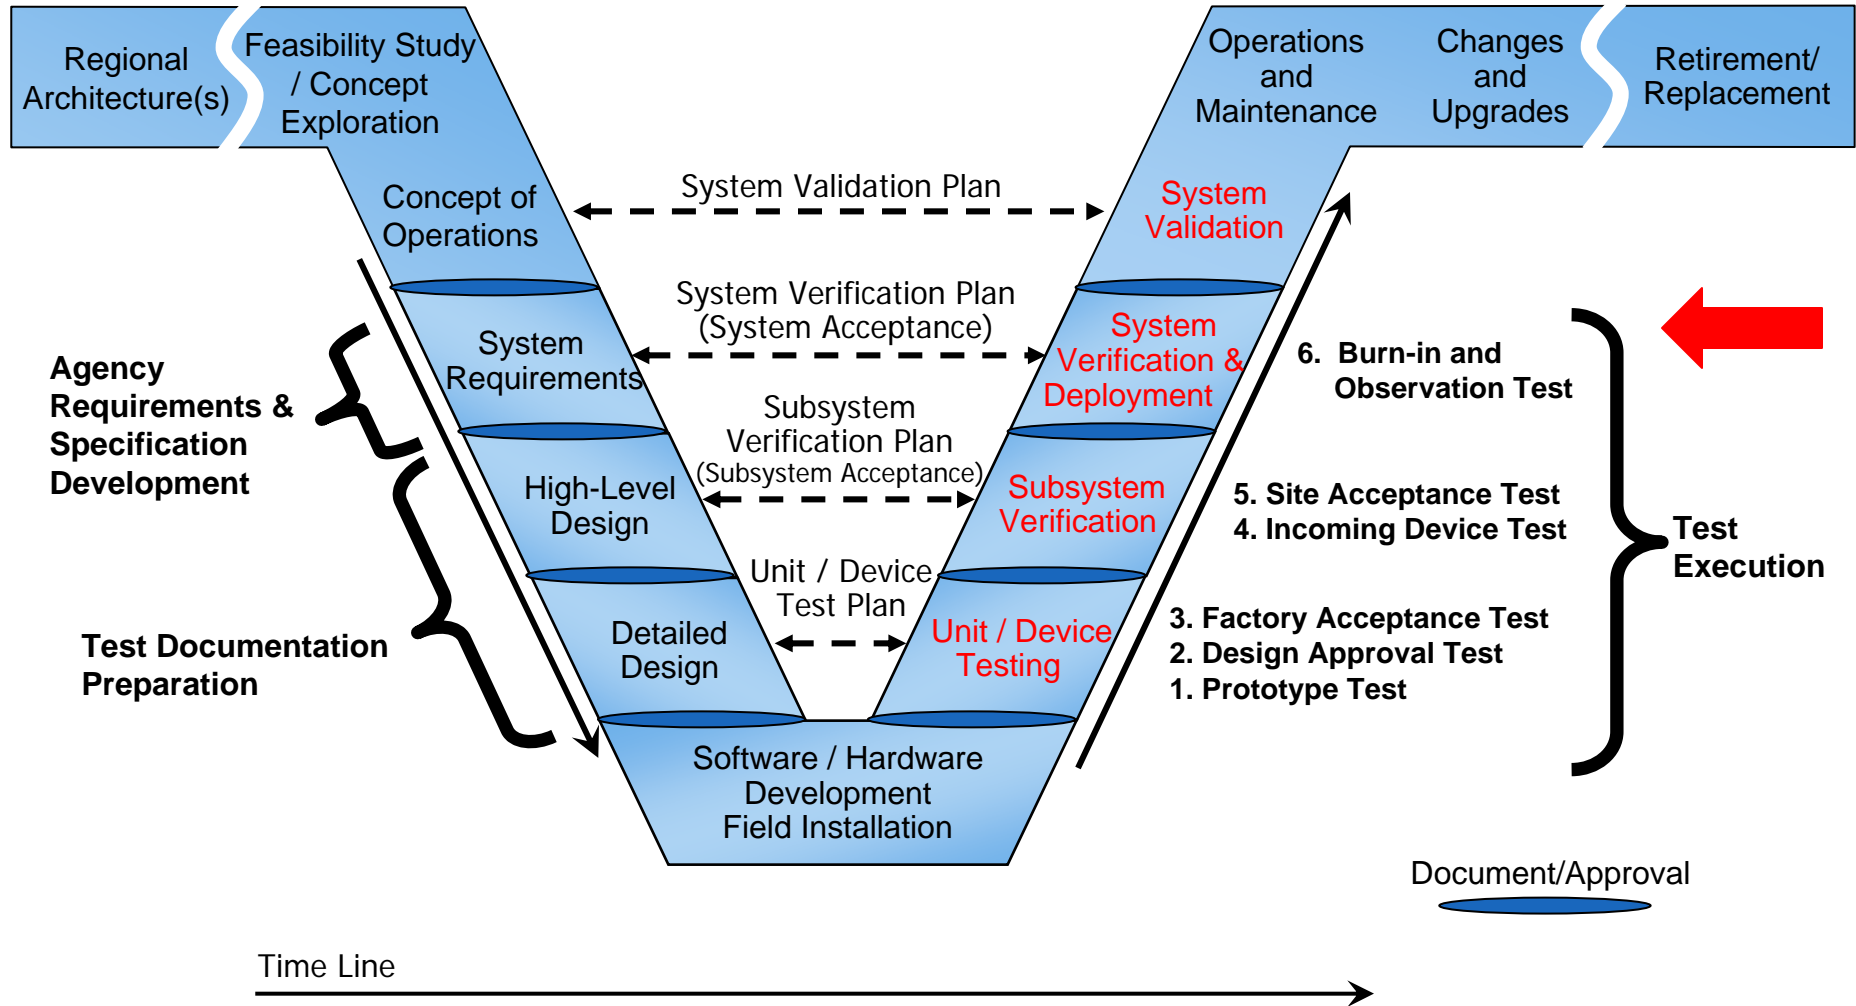

Additional Support Slides: ITS Standards Implementation and Testing as part of a Systems Engineering process

Implementation and Testing

Testing Phases

Test Phase	Purpose	Number of Units	Test Location
Prototype Test and Inspection	Verify the electrical and mechanical design.	One prototype.	Test Laboratory
Design Approval Test and Inspection	Verify the final design.	Pre-production or a small percentage of the production units	Laboratory
Factory Acceptance Test	Verify production units are identical to the final design and production quality	A percentage of the production unit.	Production factory.
Incoming Device Test	Inspect for damage due to shipping and handling.	All delivered units, including spares	Agency.
Site Acceptance Test	Full functionality of the entire system.	All installed units.	Final location for operation.
Burn-in and Observation Test	Monitor proper operation of the installed unit.	All installed units.	Final location for operation.

Test Documentation

- Test Plans. Describes the scope, approach, resources, and schedule of testing activities
- Test Designs. Describe which requirements are to be tested and which test cases cover which requirements. Pass-fail criteria.
- Test Cases. Describe the inputs, outputs, expected results, and procedures used to verify one or more requirements.
- Test Procedures. Sequence of steps in a test.
